

## Project lighting at bus stops a collaboration between the Swedish Transport Administration and Västtrafik

We have selected three x five (3 x 5) bus shelters on the road 160, at Tjörn for three selected suppliers: On screen, Grönt ljus and Traffic Systems, who each received five shelters. The next step in the project is that we have a meeting on April 20 and 21 in Gothenburg to interview each supplier together and discuss their submitted solutions for the shelters. At the same time, we will take this opportunity to go out to look at the selected bus shelters in place. The choice of bus shelters is drawn under tough conditions i.e., obscuring mountains, salty winds, etc.

The plan is that the bus shelters with the new lights shall be operational by August 15, 2010. After that date, we will post a map so that anyone who is interested can go out and see them.

The purpose of the project Nytt ljus (New light) - illuminate bus shelters is to provide an assessment of new lighting technology for shelters outside the urban area. The results, according to The Principle of Public Access, will be made public and published on the portal for Swedish Transport Administration [www.nyttljus.se](http://www.nyttljus.se) (this site, editor's note.).
